

GROUP 1

- Develop opportunities for collaboration
- Work as a community to have a clear understanding/ methodology/ tools/ long term goals
- Increase areas of integrated pest management
- Greater range of education for people that are falling through the cracks on biosecurity/ biodiversity
- Creation of carbon offset mechanisms that offset human footprint
- Work on agreements with organisations with longer funding periods i.e. landfill contract is 7 years, why do environmental groups only have 12 months?
- Looking at tools that counter tourism impact i.e. visitor tax, vacant house targeted rate
- Offer visits to pest-free islands: Hauturu?
- Resource/ support mana whenua/ iwi to be able to contribute & engage more
- Implement biosecurity measures to prevent new pests, including increasing awareness & action
- Continue discussion in community that allows community to be on the same page e.g. Ecology Visions
- 30 year outcomes for Area Plan e.g. kokako back

GROUP 2

- Information gathering for climate change mitigation
- Source additional funding – regional funding coordinator?
- Advocate in the legal & regulatory space
- Run more educational programmes
- Utilisation of local media
- Promote local victories & local action
- Support/ mentor new community groups

GROUP 3

- Formalise a co-management arrangement – DOC/ Ngati Rehua
- Work together on marae
- Develop education tools with iwi - Ngati Rehua
- Establish (or increase) education/ awareness around biosecurity threats and biosecurity “good stories” for visitors and residents
- Eradicate feral cats!
- Stop the dumping

GROUP 4

- Over next 3 years, most important actions to reduce threats & enhance values
- Reduce rat numbers
- Increased terrestrial and marine monitoring of values and threats
- Adaptive and increased education for the community as things progress and change
- Appropriate education for community, and appropriate communication
- DOC step up and do on the ground pest suppression (MBIE presence on island)
- Whole island approach to rat reduction – get active!
- Increased baseline and long term monitoring (terrestrial, freshwater, marine)
- Support each other and our diverse roles through collaborative workshops
- Social marketing
- Things that were “normal”, but actually damaging – how perceptions change
- Tools: “toolbox kits”
- Communication: community level, corporate level
